

# The Create Annual Smart Collections Plugin User Guide

## Introduction

Create Annual Smart Collections (CASC) is a simple plugin designed to create a smart collection set containing all images with a capture date in a given calendar year and, within the collection set, smart collections for each month of the given year.

## Installation

Installation of the CASC is straightforward and follows the usual procedure for Lightroom plugins: either:

- copy the plugin to the Lightroom plugins folder (**Library/Application Support/Adobe/Lightroom/Modules** in OSX, **C:/Documents and Settings/{your\_username}/Application Data/Adobe/Lightroom/Modules/** in Windows XP or **C:/Users/{your\_username}/AppData/Roaming/Adobe/Lightroom/Modules/** in Windows 7) or
- open the Plugin Manager (**File > Plugin Manager...**), click on **Add** and then navigate to the plugin folder.

CASC creates a single new menu item on the **Library > Plugin Extras...** sub-menu.

## Use

Selecting the Create Annual Smart Collections menu item displays the following dialog:

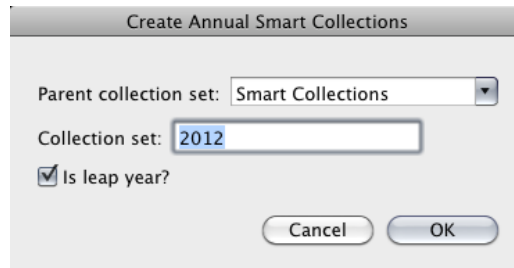

Figure 3: The CASC definition dialog

You can use the **Parent collection set** combo box to choose the collection set within which CASC will do its work. By default, the new collection set will be placed within the **Smart Collections** collection set.

Set the **Collection set** text field to the name of the collection set you wish to create. The default value for this field is the current four digit year number plus one.

The **Is leap year?** tick box will be checked if CASC believes next year is a leap year. (I believe the calculation will be accurate for the expected life of the plugin – to 2400, if my logic is correct!) You may over ride the default value if CASC is inaccurate or if you're creating a collection set for a year other than CASC's default.

When you're ready, click the **OK** button and the annual collection set will be created for you. The smart collection set will have the name you provided. The constituent monthly smart collections will be named **nn-~~mmm~~**, where **nn** is the month number, with a leading zero, and **~~mmm~~** is the three letter short month name in the language specified by the locale in which Lightroom is running.

## License

CASC is released as freeware under the [GNU general public licence](#). You are free to modify and distribute the code, provided that you also adhere to the terms of the GNU general public licence. The CASC Lua source code is included in the distribution.
